

Insert really cool logo here	Really_Cool_Title: Remote Control Car Laser Tag (RCCLT)
Version: 2	Engineer: Daniel Mortenson
Revision: 2	
Description: It's RC Cars that play Laser Tag! totally home made, totally 3D printer, total cool tell your friends	

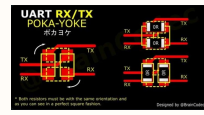

D

Figure 1 shows the pin connections for the USB6B1RL chip. The chip has 8 pins. Pin 1 is V-USB, Pin 2 is USB P, Pin 3 is USB N, Pin 4 is GND. Pin 5 is GND, Pin 6 is USB-PROT N, Pin 7 is USB-PROT P, Pin 8 is VUSB-PROT. The chip has internal connections: VCC_1 to VCC_2, I/O1_1 to I/O1_2, and I/O2_1 to I/O2_2.

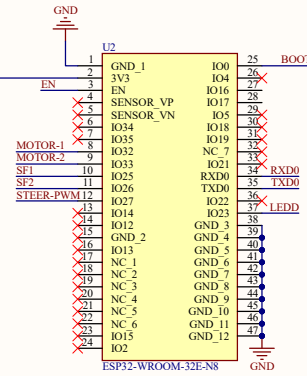

place C6 close to the MCU and c7 close to this button

The diagram shows two horizontal lines representing the TXD and RXD signals. On the left, the top line is labeled TXD and the bottom line is labeled RXD. On the right, the top line is labeled RXD0 and the bottom line is labeled TXD0. A resistor labeled R8 connects the TXD line to the RXD0 line, and a resistor labeled R9 connects the RXD line to the TXD0 line. Both resistors are labeled with 0 Ohms.

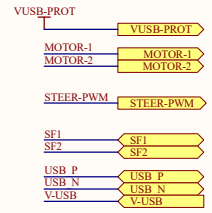

△ This is so I can swap these if I screw it up, these can be solder bridges rather than resistors

IO34 IO35
SENSOR_VN and
SENSOR_VP are input

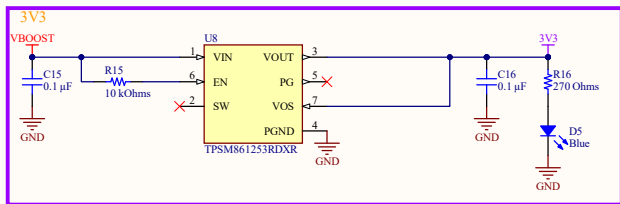

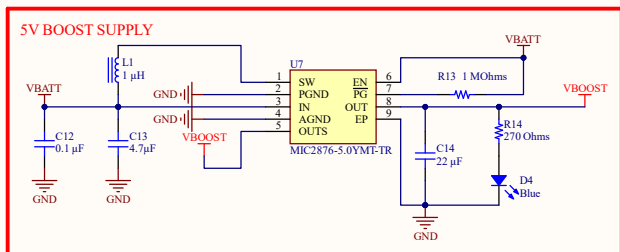

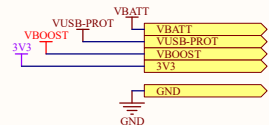

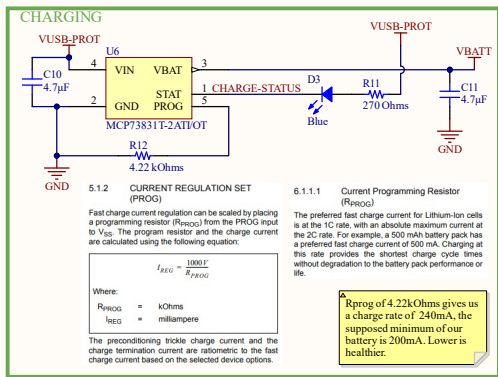

- MTDI - IO12
- GPIO0 - IO0
- GPIO2 - IO2
- MTDO - IO15
- GPIO5 - IO5
- GPIO14 - IO14 - not from data sheet, from Aaron

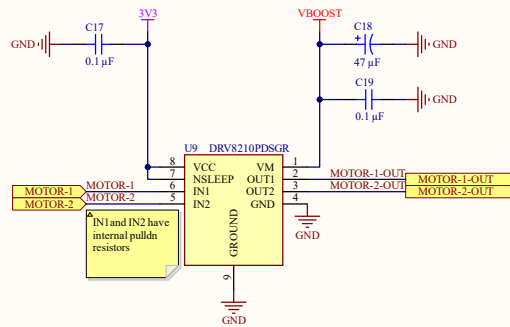

Don't use these for non-boot functions
